

Tyre Couplings - Type RTP / RTPS

Features

Torque transmission is by shear
Tyre is split into two halves, each bonded to a metal bracket
Each tyre is bolted radially to hubs mounted on shafts
Special material with high durability, strength & fatigue resistance

Benefits

Easy maintenance, as assembly & disassembly does not require any special skills
Hubs may be fitted with different orientations to achieve different DBSE
Higher misalignment capability
Taper lock bushes may be fitted if required

Applications

General Applications - Agitators, Blowers, Conveyors, Cranes, Pumps etc.
Industry Applications - Cement, Food, Rubber, Steel, Paper, Power Plants etc.

RTP

STANDARD TYPE

HUB REVERSED TYPE

RTPS

STANDARD TYPE

HUB REVERSED TYPE

Tyre Couplings - Type RTP / RTPS

The "R" in sizes RTPS-103 to RTPS-163 designates that the coupling is provided with high speed rings. Rings are standard for these sizes and optional for others. Consult for Max Bore with Square Key.
